## **PACT Cybersecurity and Healthcare: The Key to Limiting Your Risk is Being Informed**

Does your company store or maintain access to medical records?

Compliance with HIPAA and HITECH is not just for medical practices, hospitals and pharmaceutical companies anymore. Almost every company has potential exposure due to violations that can be incurred from these regulations.

What more do you have to do to keep your company's assets protected?

In this upcoming cybersecurity seminar these topics will be addressed so that regional organizations can increase their awareness and find real solutions.

## Speakers

**Greg Fliszar**, of the Health Law Practice Group and a member of the Privacy, Data & Cyber Security Industry Team will present on the legal issues of cybersecurity and healthcare at the upcoming PACT Seminar. Compliance and concern with HIPAA and HITECH are not just for medical practices, hospitals and health insurers anymore. HIPAA now applies to an enormous number and variety of businesses that provide services to the health-care industry. Any company that stores or transmits Electronic Personal Health Information (e-PHI) may potentially be subject to HIPAA's regulations and enforcement. Being breached can be expensive including loss of revenue and reputation, legal fees, and regulatory fines. There's a lot at stake.
